Lane Keeping Assist System (LKAS)*

A camera mounted between the windshield and the rearview mirror determines if your vehicle begins to move away from the center of a detected lane while driving between 45 – 90 mph (72–145 km/h).

If you cross a detected lane line without using your turn signal, a message appears on the MID and a beep sounds.

Light steering torque is applied to keep your vehicle in the middle of the lane.

Turning LKAS On or Off

1. Press MAIN. LKAS appears in the MID.

2. Press the LKAS button. Lane outlines appear in the MID. Dotted lane lines turn solid when the system operates.

3. Press MAIN or the LKAS button to turn the system off.

Important Safety Reminder

The LKAS is for your convenience only. It is not a substitute for your vehicle control. The system does not work if you take your hands off the steering wheel or fail to steer the vehicle.

Do not place an object on the top of the instrument panel. It may reflect onto the windshield and prevent the system from detecting lane lines properly.
