

Integrated Dynamics System

Choose a driving mode for your preference based on road conditions, vehicle speed, and handling.

The selected mode briefly appears in the MID.

Press the Dynamic Mode button to cycle through modes.

Comfort: Maximizes driver comfort through increased steering assist.

Normal: Balances performance for everyday driving.

Sport: Enhances vehicle response and feel through decreased steering assist, enhanced throttle response and torque biasing.

Vehicle Stability Assist (VSA®)

Also known as Electronic Stability Control (ESC), this helps stabilize the vehicle during cornering if the vehicle turns more or less than what was intended. It assists in maintaining traction on slippery surfaces by regulating engine output and selectively applying the brakes.

■ Turning VSA On or Off

VSA is turned on every time you start the vehicle. If you turn VSA off, your vehicle has normal braking and cornering ability, but VSA traction and stability enhancement become less effective.

Press and hold the VSA OFF button until you hear a beep to turn VSA on or off. The VSA Off indicator appears when the system is off.

When VSA is off, traction control allows the wheels to spin more freely at low speed. This can be helpful when trying to free your vehicle if it is stuck in mud or snow.
