

Collision Mitigation Braking System™ (CMBS™)

Can assist you when there is a possibility of your vehicle colliding with a vehicle or a pedestrian detected in front of you.

The system can alert you when a potential collision is determined, and reduce your vehicle speed to help minimize collision severity when a collision is deemed unavoidable.

The system activates when:

- The speed difference between your vehicle and a vehicle or pedestrian detected in front of you is about 3 mph (5 km/h) and over with a chance of a collision.
- Your vehicle speed is about 62 mph (100 km/h) or less and there is a chance of a collision with an oncoming detected vehicle or a pedestrian in front of you.

■ Alert Stages

The system has three alert stages for a possible collision. Depending on the circumstances or CMBS settings, CMBS may not go through all of the stages before initiating the last stage.

- Stage 1:** Visual and audible warnings, increased accelerator pedal resistance
- Stage 2:** Visual and audible warnings, light seat belt retraction, and light brake application
- Stage 3:** Visual and audible warnings, strong seat belt retraction, and strong brake application

■ Changing Settings

Determine the warning timing. Use the interface dial to make selections.

1. Press **SETTINGS**.
2. Select **Vehicle Settings**. The vehicle must be in **Park (P)**.
3. Select **Forward Collision Warning Distance**.
4. Select **Long**, **Normal** (default), or **Short**.
5. Press **BACK** to exit the menu.

■ Turning CMBS On or Off

Press and hold the **CMBS OFF** button. A beep sounds and a message appears in the MID. The **CMBS** indicator appears when the system is off.

Important Safety Reminder

CMBS is designed to reduce the severity of an unavoidable collision. It does not prevent collision nor stop the vehicle automatically. It is still your responsibility to operate the brake pedal and steering wheel appropriately according to the driving conditions.
