

# Overhead Controls

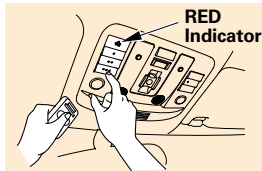

## Moonroof

The moonroof has an auto open and auto close function. The moonroof switch is located in the center ceiling panel, and has two operational positions - first and second detent.

- **To open:** Firmly slide the switch backward to the second detent. The moonroof automatically opens all the way. To stop the moonroof, push the switch forward briefly. Use the first detent to open it to the desired position.

## HomeLink®

The HomeLink Universal Transceiver can be programmed to operate remotely controlled devices around your home (such as garage doors, lighting or security systems). It can replace up to three remote transmitters.

*If you have any problems programming HomeLink, call 1-800-355-3515.*
