

## Reactive Force Pedal

Assists during driving by responding to the force of your foot on the accelerator pedal.

When you press the accelerator pedal, the system can provide slight resistance to prevent you from applying excessive throttle to the accelerator. Usually, the feedback is unnoticeable while driving.

As a result, this can yield better fuel efficiency and provide traction control while driving on slippery roads.

The system also can provide slight resistance through the accelerator during operation of the Collision Mitigation Braking System™.

Reactive force pedal is off in Sport mode.

### ■ Changing Settings

Adjust the pedal force level. Use the interface dial to make and enter selections.

1. Press **SETTINGS**.
2. Select **Vehicle Settings**.
3. Select **Reactive Force Pedal**.
4. Select one of the options.

*High Force*: More pedal feedback.

*Low Force*: Less pedal feedback and natural acceleration feeling.

5. Press **BACK** to exit the menu.
