

Collision Mitigation Braking System™ (CMBS™)

Can assist you when there is a possibility of your vehicle colliding with a vehicle or a pedestrian detected in front of yours. CMBS™ is designed to alert you to a potential collision, as well as to reduce your vehicle speed to help minimize collision severity when a collision is deemed unavoidable. The CMBS™ activates when:

The system provides visual and audible alerts if you do not take appropriate action to avoid a collision.

When to use

The camera is located behind the rearview mirror.

The radar sensor is behind the emblem.

The system starts monitoring the roadway ahead when your vehicle speed is about 3 mph (5 km/h) and there is a vehicle in front of you.

The CMBS™ activates when:

- The speed difference between your vehicle and a vehicle or pedestrian detected in front of you becomes about 3 mph (5 km/h) and over with a chance of a collision.
- Your vehicle speed is about 62 mph (100 km/h) or less and there is a chance of a collision with an oncoming detected vehicle or a pedestrian in front of you.

■ Alert Stages

The system has three alert stages for a possible collision. Depending on the circumstances or CMBS™ settings, CMBS™ may not go through all of the stages before initiating the last stage.

Stage 1: Visual and audible warning.

Stage 2: Visual and audible warning, light brake application.

Stage 3: Visual and audible warning, strong brake application.

■ Changing Settings

Determine the warning timing. Use the interface dial to make selections.

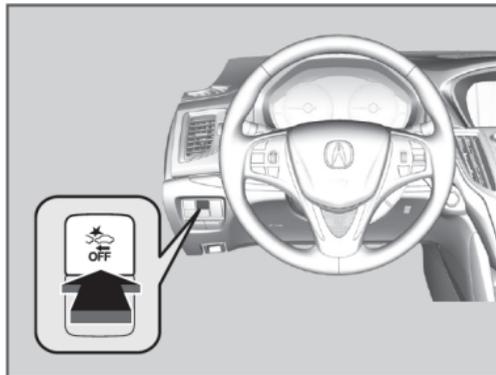

1. Press the SETTINGS button.
2. Select Vehicle Settings, Select Driver Assist. The vehicle must be in Park (P).
3. Select Forward Collision Warning Distance.
4. Select Long, Normal, or Short.
5. Press BACK to exit the menu.

■ Turning the System On or Off

The CMBS™ is turned on every time you start the engine, even if you turned it off the last time you drove the vehicle.

Press and hold the CMBS™ OFF button.

A beep sounds and a message appears on the Multi-Information Display. The CMBS™ indicator appears when the system is off.

■ Important Safety Reminder

CMBS is designed to reduce the severity of an unavoidable collision. It does not prevent collisions nor stop the vehicle automatically. It is still your responsibility to operate the brake pedal and steering wheel appropriately according to the driving conditions.
