Auto Idle Stop Function

To improve fuel economy, the engine stops and then restarts as detailed below. When Auto Idle Stop is on, the Auto Idle Stop indicator (green) comes on.

Auto Idle Stop

To help maximize fuel economy, the engine automatically stops when the vehicle comes to a stop, depending on environmental and vehicle operating conditions. The indicator (green) comes on at this time.

The engine then restarts once the vehicle is about to move again, and the indicator (green) goes off.

The environmental and vehicle conditions that impact Auto Idle Stop system operation are varied.

If the driver’s door is opened while the indicator (green) comes on, a buzzer sounds to notify you that the Auto Idle Stop function is in operation.

A message associated with Auto Idle Stop appears on the multi-information display.

The 12-volt battery installed in this vehicle is specifically designed for a model with Auto Idle Stop. Using a 12-volt battery other than this specified type may shorten the 12-volt battery life, and prevent Auto Idle Stop from activating. If you need to replace the 12-volt battery, make sure to select the specified type. Ask a dealer for more details.
To turn the Auto Idle Stop system off, press this button. The Auto Idle Stop system stops.

The Auto Idle Stop system is turned on every time you start the engine, even if you turned it off the last time you drove the vehicle.

If you turn off the Auto Idle Stop system while it is activated, the engine will restart.
When Driving

Auto Idle Stop

The vehicle stops with the gear position in D and the brake pedal depressed.

Auto Idle Stop does not activate when:
- The Auto Idle Stop OFF button is pressed.
- The driver’s seat belt is not fastened.
- The engine coolant temperature is low or high.
- The transmission fluid temperature is low or high.
- The vehicle comes to a stop again before the vehicle speed reaches 3 mph (5 km/h) after the engine starts.
- Stopped on a steep incline.
- The transmission is in a position other than D.
- The engine is started with the hood open.
- Turn off the engine. Close the hood before you restart the engine to activate Auto Idle Stop.
- The battery charge is low.
- The internal temperature of the battery is 14°F (−10°C), or less.
- The climate control system is in use, and the outside temperature is below −4°F (−20°C) or over 104°F (40°C).
- The climate control system is in use, and the temperature is set to the Hi or Lo.
- [ ] is ON (indicator on).
- The dynamic mode is changed to Snow or Sport+ mode.

Auto Idle Stop Activates When:

- Do not open the hood while the Auto Idle Stop function is activated. If the hood is opened, the engine will not restart automatically.
- In this case, restart the engine with the ENGINE START/STOP button.
- When ACC with Low Speed Follow is in operation, the vehicle stops without depressing the brake pedal and Auto Idle Stop may activate.
- Pressing the ENGINE START/STOP button causes the engine to no longer restart automatically. Follow the standard procedure to start the engine.
Auto Idle Stop may not activate when:
• The vehicle is stopped by braking suddenly.
• The steering wheel is operated.
• Altitude is high.
• The climate control system is in use, and there is a significant difference between the set temperature and the actual interior temperature.
• The climate control system is in use, and humidity in the interior is high.
When Driving

Auto Idle Stop

The Engine Automatically Restarts When:

- The brake pedal is released (without the automatic brake hold system activated).
- The accelerator pedal is depressed (with the automatic brake hold system activated).

The engine restarts even if the brake pedal is depressed when:

- The Auto Idle Stop OFF button is pressed.
- A steering wheel is operated.
- The transmission is put into [R], [S], and [P], or taken out of [N] and put into [D].
- The pressure on the brake pedal is reduced and the vehicle starts moving while stopped on an incline.
- The brake pedal is released slightly during a stop.
- The battery charge becomes low.
- The accelerator pedal is depressed.
- The driver’s seat belt is unlatched.
- [ ] is ON (indicator on).
- The climate control system is in use, and the difference between the set temperature and actual interior temperature becomes significant.
- The climate control system is being used to dehumidify the interior.
- The vehicle ahead of you starts again when your vehicle stops automatically with ACC with Low Speed Follow.
- The dynamic mode is changed to Snow or Sport+ mode.

If you are using an electronic device during Auto Idle Stop, the device may temporarily be turned off when the engine restarts.

If the automatic brake hold system has been turned off, or if there is a problem with the system, the engine will restart automatically when you release the brake pedal.
